                                                                                                                                                                                                                                                                                      The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning; beverage production; as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplification of a template nucleic acid with a primer pair capable of preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylanase protein isolated from an environmental

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             method involves the direct screening of a cDNA library prepd. in bacteria (e.g. E. coli) transformed with DNA from a eukaryotic organism (e.g. A. niger) that produces the protein. Screening for xylanase-producing clones can be performed on agar plates containing oat spelt xylan and RBB-xylan. The method was utilised in the identification of cDNA clones (AAT63042-46) coding for A. niger cellulase, xylanase and arabinoxylan degrading enzymes (AAW14595-99). (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

The present invention describes a culture medium obtained from the culture of a recombinant host cell that is not Actinomadura flexuosa and content into the manufacturity, where the protein comprises an amino acid sequence from a codifylic fragment of the amino acid sequence in AAY24481 or AAY24481.

CC Also described is an enzyme preparation derived from the culture medium. CC modifying plant biomass properties, especially the reduction of lignin content in pulp and paper processing. The xylanases are hemicellulases which partially degrade the hemicellulose and enhance the extractability content of wood pulp, increase its drainability or decrease its water retention. The culture medium can be used directly without the need to purify the enzymes. Actinomadura flexuosa xylanases have a ph optimum and content of acidify the pulp prior to xylanase treatment. The xylanases consent of lignin by conventional bleaching of wood pulp reducing the partially degrade the hemicellulose in wood pulp which enhances the consumption of bleaching chemicals reducing the partially degrade the hemicellulose.

CC partially degrade the hemicellulose in wood pulp which enhances the consumption of bleaching chemicals reducing the form lower consumption of bleaching chemicals reducing the form alower consumption of bleaching chemicals reducing the formation of continomadura sp. DSM43186 35 kDa xylanase N.B. This sequence is indexed consumption of streat as basic specification for F19503639.

FvM was prepared from pooled RNA obtained from a 48-hour

and a 72 hour, liquid GYAM culture from strain M-3125.

Cultures were vacuum filtered and the mycelial mats were

frozen in liquid nitrogen, ground to a powder, and then

added to TRIzol Reagent (Invitrogen, Carlabad CA) at

approximately 1 g mycelia per 10 ml TRIzol. The cDNA was

directionally ligated into the pBlueScript II SK(+) XR

vector (cDNA Synthesis Kit; Stratagene)."

/note="Vector: pBluescript II SK(+) XR; Site 1: EcoRI;
Site 2: XhoI; supplier: Pathogen-challenge series. Tubers
from pathogen-free Solanum tuberosum var. Shepody, clone
1756, were inoculated with 5 ul of Phytophthora infestans
(A2-mating type), through 2 puncture wounds 3 cm apart.
The tubers were incubated 1 minute to allow inoculum
absorption. The infection area was outlined for future
collection reference. Surface slices were sampled from the
tubers at 1 day, 5 days, 7 days, 11 days and 14 days
post-infection. All samples were pooled and used for RNA
isolation and library construction. A normalized library
was constructed following a modified protocol of Bonaldo
et al. (1996. Genome Research 6: 791-806)."

Surface slices were sampled from the tubers at 1 day, 5 days, 7 days, 11 days and 14 days post-infection. All samples were pooled and used for RNA isolation and library construction. A normalized library was constructed following a modified protocol of Bonaldo et al. (1996. Genome Research 6: 791-806)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23.7%;

Site 2: XhoI; anamorph: Fusarium verticillioIdes. Library
FvI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inoculated by dipping briefly in
a suspension of 5 x 10e6 conidia per ml. The inoculated
roots and shoots were then incubated on moistened Whatman
#1 filter paper at room temperature under sterile
conditions for 4 days. Fungal mycelial was collected,
frozen in liquid nitrogen, ground to a powder, and then
added to TRIzol Reagent (Invitrogen, Carlsbad CA) at
approximately 1 g mycelia per 10 ml TRIzol. The cDNA was
directionally ligated into the pBlueScript II SK(+) XR
vector (cDNA Synthesis Kit; Stratagene)."

Site_2: XhoI; anamorph: Fusarium verticillioIdes. Library
FvI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inoculated by dipping briefly in
a suspension of 5 x 10e6 conidia per ml. The inoculated
roots and shoots were then incubated on moistened Whatman
#1 filter paper at room temperature under sterile
conditions for 4 days. Fungal mycelial was collected,
frozen in liquid nitrogen, ground to a powder, and then
added to TRIzol Reagent (Invitrogen, Carlsbad CA) at
approximately 1 g mycelia per 10 ml TRIzol. The cDNA was
directionally ligated into the pBlueScript II SK(+) XR
vector (cDNA Synthesis Kit; Stratagene)."

FvI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inoculated by dipping briefly in
a suspension of 5 x 10e6 conidia per ml. The inoculated
roots and shoots were then incubated on moistened Whatman
#1 filter paper at room temperature under sterile
conditions for 4 days. Fungal mycelial was collected,
frozen in liquid nitrogen, ground to a powder, and then
added to TRIzol Reagent (Invitrogen, Carlsbad CA) at
approximately 1 g mycelia per 10 ml TRIzol. The cDNA was
directionally ligated into the pBlueScript II SK(+) XR
vector (cDNA Synthesis Kit; Stratagene)."

                                                                        TITLE
DR630899

ON EST1021027 FvI Gibberella moniliformis cDNA clone FVIDX40, mRNA sequence.

DR630899

DR630899.1 GI:70705629

EST.

Gibberella moniliformis

Gibberella moniliformis

Eukaryota; Fungi; Ascomycota; Pezizomycotina; Sordariomycetes;

Hypocreomycetidae; Hypocreales; Nectriaceae; Gibberella.

//OCIONE_ILDETFYIT
//NOTES_TVECTOOT: pBlueScript II SK(+) XR; Site 1: EcoRI;
Site_2: XhoI; anamorph: Fusarium verticillioIdes. Library
FvI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inoculated by dipping briefly in
a suspension of 5 x 10e6 conidia per ml. The inoculated
roots and shoots were then incubated on moistened Whatman
#1 filter paper at room temperature under sterile
conditions for 4 days. Fungal mycelial was collected,
frozen in liquid nitrogen, ground to a powder, and then
added to TRIzol Reagent (Invitrogen, Carlsbad CA) at
approximately 1 g mycelia per 10 ml TRIzol. The cDNA was
directionally ligated into the pBlueScript II SK(+) XR
vector (cDNA Synthesis Kit; Stratagene)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /organism="Gibberella moniliformis"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            #1.
